

Can the milk stored in the freezer be mixed

Can breast milk be stored in a shared refrigerator?

Storing breast milk in a shared refrigerator and washing pump parts in community break rooms are unlikely to pose sanitation or safety health risks. However, it is important that the breast pump equipment be cleaned, dried, and stored in a clean environment to protect the equipment and expressed breast milk from contamination.

Can you mix cooled breast milk with frozen milk?

Mixing freshly expressed breast milk with already cooled or frozen milk is not advised because it can rewarm the older stored milk. It is best to cool freshly expressed milk before combining it with older, previously cooled or frozen milk. Also consider storage recommendations for breast milk.

Can you freeze breast milk after 4 days?

After 4 days of refrigeration, your breast milk should be used or thrown away. Breast milk properties slow the growth of bad bacteria. These properties begin to decline after a few days of refrigeration. If you think you won't use breast milk within a few days, freeze it as quickly as possible. Can I mix fresh breast milk with older breast milk?

Can breast milk be frozen with dry ice?

Breast milk frozen with dry ice can be transferred to the freezer or to the refrigerator if you plan to use it in the next few days. Depending on the destination, if no reliable breast milk storage is available, consider using temperature-controlled shipping to transport breast milk. If this is not an option, discard the expressed breast milk.
