

What is Colombia's Energy Plan 2050?

Further electrification of end-uses, especially transportation, in conjunction with the decarbonisation of electricity generation, is an important pillar of clean energy transitions. Colombia launched the Energy Plan 2050 in 2016, which aims to diversify the country's energy resources and ensure a reliable energy supply.

Why is electricity so important in developing countries?

But it is still growing rapidly in many emerging market and developing countries, especially those where a significant fraction of the population still lacks access to electricity. Electricity is primarily used for heating, cooling, lighting, cooking and to power devices, appliances and industrial equipment.

How does electricity trade differ from other energy commodities?

Unlike other energy commodities such as coal, oil and natural gas, electricity trade between countries is relatively limited as it is more technically complex and requires a direct cross-border interconnection.

How does electricity production match demand?

Electricity production tends to closely match demand, which in turn is driven by economic and population growth and changes to the structure of the economy.

Updated monthly, the report provides price assessments and market analyses for Electricity, encompassing generation by source, consumption, and trade dynamics. It also covers ...

Per-capita electricity consumption Growth in electricity demand has slowed down or even reversed in many advanced economies due to energy efficiency efforts and the shift towards less ...
