

The paper concludes the widely-used control strategy of LCL grid-connected inverter, including adjusting inverter parameters, introducing a filter, voltage source admittance control strategy, and ...

To tackle this problem, the grid-side current feedback control with inductor-capacitor-inductor (LCL) resonance damping is proposed in this paper. In this case, a ...

Abstract As an essential part in technologies for energy storage systems (ESSs) or renewable energy systems (RESs), grid-connected inverters need power passive filters to meet grid ...

In this demo model, an active damping technique is employed over passive damping, with the merit of less power losses. This document describes the implementation of the power stage and controls ...

This book focuses on control techniques for LCL-type grid-connected inverters to improve system stability, control performance and suppression ability of grid current harmonics.

To improve the anti-interference performance and reduce the output current harmonic content of the grid-connected inverter, an improved control strategy that combined repetitive control (RC) and auto ...

It aims to address multiple challenges faced by LCL grid-connected inverters in weak grid environments, including inherent resonance, grid impedance, and background harmonics.

In this article, an alternative active damping method is proposed for LCL-filtered grid-connected inverter, which is compared with the existing capacitor current feedback active damping ...

To address this issue, a novel active damping control strategy based on the principle of equivalent transformation is proposed in this paper, which not only effectively suppresses the ...

LCL-type grid-connected inverters have seen extensive use of the passivity-based control (PBC) system. However, traditional PBC systems rarely take time delay into account while designing ...
