

Welcome to learn about our automatic 6-station battery stacking machine, a core assembly equipment specially designed for the automation production line of medium and large-sized power battery ...

Energy storage device production equipment forms the backbone of sustainable energy systems. From lithium-ion battery assembly lines to flow cell fabrication tools, these machines determine product ...

The application landscape for cell stacking equipment is diverse, encompassing lithium-ion batteries, fuel cells, supercapacitors, and other emerging energy storage technologies.

We know the market requirements and are perfectly able to adapt our lithium-ion assembly machines to your needs. User-friendliness, efficiency, and traceability are as important as safety factors. Precise ...

A well-designed and optimized behind-the-meter (BTM) battery energy storage system unlocks the opportunity for value stacking or "stacking services" - leveraging the same equipment, system, ...

We are a national high-tech enterprise that specializes in the front-end and back-end production of new energy lithium battery cells integrating technology R& D, manufacturing and sales services, as well as ...

Compatible for stacking for both regular electrodes and pure Lithium anode electrodes in the Ar glove box or dry room. Hybrid stacking modes of regular Z-type stacking and piece-by-piece sequence ...

LEAD has released of an integrated solid-state battery cutting and stacking machine targeted at addressing the technical challenges of next-generation energy storage manufacturing.

Discover SigenStack's modular BESS solutions and energy storage systems, designed for scalable and efficient energy management in various commercial and industrial applications.

Tailored Stacking Equipment: We provide customized Battery stacking machines (Z-type, Cut & Stack, Thermal Lamination) designed for your specific R& D, pilot, or mass production needs.
