

What is a solar inverter?

Solar inverters are the heart of any solar energy system, converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power for homes, businesses, or utility grids.

How do inverters work in a rooftop solar system?

The electricity produced by solar panels is initially a direct current (DC). Inverters change the raw DC power into AC power so your lamp can use it to light up the room. Inverters are incredibly important pieces of equipment in a rooftop solar system. There are three options available: string inverters, microinverters, and power optimizers.

What is a solar inverter & why is it important?

Solar panels, while important, are just one part of the solar array--the complete system that produces energy from sunlight. Another essential component is the inverter, and thanks to technological advancements, there are inverter options.
