Overvoltage and Undervoltage Earth Fault Overcurrent The 3 Most Common Faults on Inverters and How to Fix Them This is detected by an imbalance of the currents supplying the motor implying a leakage current to earth is present. This is usually caused by poor insulation resistance to earth. POSSIBLE FIXES: 1. Check insulation resistance of the motor and cabling. 2. Check that there are no power factor correction capacitors or surge absorbers in the motor cab... See more on inverter drive systems enphase Micro inverters are not producing. Dc voltage too low. Then check your male and female connections between the last panel that is reporting power and the first panel that isn't reporting power known as "the jumper". You should have 120 volts on each side. ...

This can be caused by a missing supply voltage phase from a blown fuse or faulty isolator or contactor or internal rectifier bridge fault or simply low mains voltage.
