

Is it okay to install solar panels on a prefabricated roof

Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

Can solar panels be installed on a slate roof?

There's more work involved than with asphalt tiles, but solar panels work just fine on slate and concrete tile roofs. Clay, slate, and concrete tiles are usually removed and replaced during solar panel installation.

Can solar panels be installed on a wood roof?

Like asphalt shingles, installing solar panels on a wood or cedar roof mainly consists of drilling into a roof stud and slipping flashing under the wood pieces to prevent leaking.
