

How much does energy island cost?

The design and estimated costs are the following: 1,4 GW DC: tender ongoing, total cost estimate about 4 billion euros. Each cost component of the Energy Island has seen steep cost increases, but by far the highest cost increase is in the DC-part. This has not been contracted yet and can still be put on hold, or even stopped.

How much does a wind Island cost?

The planned energy island off the Belgian coast is likely to cost at least EUR7 billion, instead of the initial estimate of EUR2 billion. The island is intended to connect new offshore wind farms to land and eventually be connected to an international wind farm network.

Are energy Islands cost-competitive?

John Ammentorp, country market director for energy, explores ways to make energy islands cost-competitive and help move this groundbreaking concept from the drawing board to reality. The concept of energy islands entered the spotlight when Denmark unveiled its ambitious net zero vision in the climate agreement for energy and industry in 2020.

Where is energy island located?
