

Between 2005 and 2011 a surge in renewable energy investments and production took place in Italy, particularly in wind and solar energy during the latter years.

In 2023, renewables generated 40% of Italy's electricity, a major increase compared to a decade ago. Solar pv is at the forefront, with over 37GW installed, driven by large-scale projects in ...

In the first six months of 2024, the electricity production from renewable sources rose by 27.3% compared to the first half of 2023 and for the first time surpassed production from fossil fuels,...

As a result, renewables are projected to overtake thermal power as the primary source of Italy's electricity generation in 2030 and will continue to increase their share to 55.9% in 2035, ...

According to statistics released by Italian power grid operator Terna SpA (BIT:TRN) on Thursday, the share of renewables in the total coverage increased from 37.1% in 2023, mostly ...

Italy's energy system has changed notably since 2010 and today the country's energy mix includes more natural gas and renewable energies and less coal and oil.

Italy's remarkable achievement in reaching a record 41% renewable energy share in its power demand by 2024 illustrates the country's commitment to sustainable energy practices and ...

The share of renewable energy in gross final consumption has been increasing in Italy since 2005. The share more than doubled between 2005 and 2023, mainly due to the increase in ...

Around 84% of Italy's electricity demand in 2024 was met by domestic production and the remaining share by the balance of energy exchanged with foreign countries.

Italy's share of renewable energy is expected to continue its upward trajectory. By 2030, projections suggest renewables could account for 35-40% of the country's energy production. Technological ...
