

A one million-kilowatt integrated solar-thermal and photovoltaic comprehensive energy demonstration project has officially connected to the grid for power generation in northwest China's ...

Spanning approximately 1,879 acres at an investment of RMB ¥11 billion, the Ruoqiang project sits on the southeastern edge of the Taklamakan desert, the ambitious initiative including ...

The project will convert solar energy into thermal power during the day, enabling stable power generation for up to eight hours during nighttime.

This ambitious initiative includes 1,280 solar power generation arrays and four 220kV substations--the largest of their kind in China. This project is designed to deliver robust renewable ...

Installed in the challenging geographical and climatic conditions of Yunnan Province, China, these modules have proven their competitiveness with impressive real-world generation data, ...

With this shipment, Huasun has now supplied its cutting-edge modules to the two largest single-site heterojunction solar projects in the world. As the largest HJT manufacturer, the company ...

Modules are installed at a height of 3 meters, and they will substantially increase the humidity retention of the soil, by 30-60%, highlighting the synergy of renewable energy generation, ...

Bekaert proudly announces the completion of a 30MWp rooftop solar project on the grounds of its campus in Jiangyin, China. The installation will produce over 30 million kWh of green electricity and ...

At the height of its power n continues to innovate. The company is now on its third-generation cell technology, incorporating microcrystalli
