

This meter can display charging parameters such as battery and solar panel voltage, current (amps), power (watts), accumulated energy and the state of charge of your battery.

This controller can only be used to control the charging from solar panels to lead-acid battery. It can not be used to control other generating appliances to charge the battery.

As the photovoltaic (PV) industry continues to evolve, advancements in Juyou Photovoltaic Panel Control have become critical to optimizing the utilization of renewable energy sources.

1 If you buy a 20/25W panel, when the sunlight is strong, the panel outputs power to your device; when the sunlight is weak, the battery provides power to your device.

There are lithium battery and lead-acid battery switching function (at the battery type interface, 3 seconds into the switch settings), the default is lithium battery. Connect the battery to the charge ...

Learn about host panel features, detailed functions, Bluetooth connectivity, troubleshooting, and FCC compliance. User manuals, setup guides, troubleshooting help, and repair information for ...

View user manuals for all Solar Controller and Accessories, including PWM and MPPT solar controllers.

&#183; Provides multiple load control mode options for light based, time based and manually adjusted scenarios.

The setting range is 9.0--12.0 V. You can also choose the battery to automatically select the appropriate parameters. Load output control, close or open, and display the current status through data collection.

Installation: Describes the connection sequence for solar panel and battery to ensure proper installation and operation. Troubleshooting: Lists potential issues, causes, and solutions to troubleshoot ...
