

Australia is a sunburnt country - so it may not be surprising to find out that it has been instrumental in the development of solar power. Here are some of our most notable solar ...

The report examines manufacturing opportunities across Australia's solar PV supply chain, from polysilicon to wafers, cells and modules, and offers recommendations on how Australia can...

Solar power in China China's solar potential Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025.

For Australia, one of the world's largest exporters of coal and gas, there is plenty to take from this, with China's furious electrification paving the way for the rest of the world to follow.

As a result, the Wollar Solar Project became the only Chinese-funded new energy project in recent years to pass Australia's rigorous regulatory approval process, offering a valuable case ...

Chinese, French, Spanish and several big Asian companies have carved up the fast-growing large-scale solar farm development sector as they tap Australia's booming growth in ...

In April 2025, China installed more solar electricity in a single month than Australia has ever done. Australia leads the world in solar energy, so this is not about the country lagging behind.

CEF forecasts that through to 2040, China will install a world-leading 323GW per annum of solar capacity, 80GW of wind, 1GW of hydropower and 3GW of nuclear.

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentivesChina is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.

The Wollar Solar Project in Australia, undertaken by POWERCHINA, successfully connected to the grid and began generating electricity on Sept 19. The project is both the largest solar power initiative in ...

Australia and China share strong complementarities in green energy. Australia has abundant natural resources while China leads the world in clean tech and green energy ...
