

With the continuous rise in photovoltaic(PV) penetration, the problem of inherent resonant frequency offset of LCL filters caused by PV-storage grid-connected systems has become ...

Aiming at the resonance problem of grid connected substations with photovoltaic inverters, an equivalent circuit model of the substation distribution network with photovoltaic inverters is constructed, which ...

This study proposes an adaptive control algorithm for grid-connected PV inverters to suppress the resonance condition excited by grid inductance variation, resulting from the dynamic ...

First, an engineering mathematical model of a 200 MW photovoltaic inverter cluster is established, and the mechanism of the active damping of the cluster inverter influenced by the ...

To address this, we propose a resonance suppression method based on virtual resistance for three-phase photovoltaic grid-connected inverters.

To suppress grid-connected resonance, the mathematical model, resonance mechanism and resonance characteristics of the cluster inverters are analyzed, and a global resonance ...

To solve the resonant suppression problem of grid-connected photovoltaic inverters, an efficient active resonant suppression strategy is proposed. When converti.

In response to the key engineering problems of photovoltaic grid-connected inverter cluster resonance suppression affected by grid-connected inverter impedance, in this paper, a...

In order to suppress the resonance caused by the integration of photovoltaic inverter clusters into the grid, this paper proposes a photovoltaic inverter cluster resonance suppression ...

By comparing and analyzing the undamped and damped control schemes, it is concluded that the active damping scheme is effective in suppressing resonance in grid-connected inverters.
