

The gas-fired Rocksavage facility has been operating for 25 years but the new proposals would see it become the first of its kind in the UK to blend the use of hydrogen and natural gas to ...

InterGen have owned and operated the gas-fired Rocksavage plant for nearly 25 years. It anticipates that by 2028, Rocksavage will have enough hydrogen produced by HyNet to move towards a 100% ...

Runcorn's Rocksavage gas power plant is to switch to hydrogen ...

HyNet North West and InterGen, an independent power producer, have released plans to collaborate on the creation of a zero-carbon power station that blends hydrogen with natural gas, at ...

The HyNet North West project milestones mean that Rocksavage could be the first plant in the UK to blend Hydrogen with natural gas, a step forward for the industry in the target for net-zero.

The gas-fired Rocksavage facility operated by independent power producer InterGen in Cheshire, U.K., since 1998 will soon begin a transition to a hydrogen-natural gas blend as primary fuel.

Rocksavage is a highly flexible combined cycle natural gas fired power plant located in the north west of England some 20 miles south east of Liverpool. It has a generating capacity of 810MW, which is ...

Plans for a low carbon power plant with the potential to become carbon neutral by 2028 have been unveiled. The gas-fired Rocksavage facility in Runcorn, Cheshire, has been operating ...

Runcorn's Rocksavage gas power plant is to switch to hydrogen fuel this decade in a major project aimed at decarbonising the region and adapting to the climate crisis.
