

Six major wind solar and energy storage bases in western europe

Where are offshore wind farms located in Europe?

The main EU producers of offshore wind energy are Germany, the Netherlands, Belgium and Denmark. Explore the Map of the Week to see where offshore wind farms are located. The Offshore Renewable Energy Strategy proposes to increase Europe's offshore wind capacity to at least 60 GW by 2030 and to 300 GW by 2050.

How much wind power does Europe have?

Europe now has 285 GW of wind power capacity, 248 GW onshore and 37 GW offshore. The EU-27 accounts for 231 GW of the total installed capacity, 210 GW onshore and 21 GW offshore. We expect Europe to install 187 GW of new wind power capacity over 2025-2030. The EU-27 should install 140 GW of this - 23 GW a year on average.

How much wind power does Europe have in 2024?

Europe installed 16.4 GW of new wind power capacity in 2024. The EU-27 installed 12.9 GW of this. 84% of the new wind capacity built in Europe last year was onshore. 2.6 GW of new offshore wind power capacity was connected to the grid. Europe now has 285 GW of wind power capacity, 248 GW onshore and 37 GW offshore.

Which countries build the most wind power in 2024?

Germany (4 GW) built the most new capacity last year, thanks to its rapid ongoing onshore wind expansion. After Germany, the UK (1.9 GW) and France (1.7 GW) built the most new capacity. All three countries installed new capacity onshore and offshore. The capital raised for new wind projects in Europe was EUR33bn in 2024.

Six countries provided for over 70% of power plants commissioned in Europe. The pace of commissioning wind-driven power plants (wind farms) in Europe slowed down: in 2023, wind farms of ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent ...

Explore the Map of the Week to see where offshore wind farms are located. The Offshore Renewable Energy Strategy proposes to increase Europe's offshore wind capacity to at least 60 GW ...

547 Energy invests in and partners with innovative companies and development platforms around the globe that focus on onshore and offshore wind, solar, battery storage, green hydrogen, energy ...

In 2025, Europe is all set for impactful wind and solar energy projects. Check out our blog for the top 10 new upcoming renewable projects in Europe.

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With

Six major wind solar and energy storage bases in western europe

operated battery storage capacity now exceeding 20GW [1], the continent is rewriting the rules ...

This would bring total installations in Europe and the EU to 450 GW and 351 GW respectively by 2030. To meet the EU's 42.5% renewable energy target, installations in the EU would ...

Comprehensive news coverage of renewable energy projects, investments, and policies across Europe. Track the latest in solar PV, onshore and offshore wind, hydrogen, energy storage, ...

The study offers an in-depth examination of the capabilities and output of renewable energy sources, specifically focusing on solar, wind, hydroelectr...

During 2025, more than 80 GWh of energy storage capacity were awarded across Europe, according to an exclusive compilation by Energía Estratégica. The figure, which includes ...
