

Solar photovoltaic panels installed per capita

The range of the base year estimates illustrates the effect of locating a utility-scale PV plant in places with lower or higher solar irradiance. The ATB provides the average capacity factor for 10 resource categories in the ...

In 2024, Australia ranked as the largest producer of solar energy per capita, with a generation of ***** kilowatt hours per person.

Per capita figures are calculated by dividing total values by the population of the country or region. Population data is constructed by Our World in Data, based on various sources.

China installed 120 GWac of utility-scale PV in 2023, a 275% increase from 32 GWac installed in 2022. Reasons for the surge included declining module prices and increasing construction of renewable energy ...

Photovoltaic systems account for the great majority of solar capacity installed in the world. CSP represents a minor share of solar power capacity, and is present in significant quantities only in a few countries.

In 2022, the average per capita solar energy consumption was 432 kWh, with Australia emerging as the reigning champion. In 2023, 56GW of solar PV capacity was installed across the EU, a 40 increase ...

Discover all statistics and data on U.S. residential solar photovoltaics now on statista !

This concentration raises critical questions: How does solar adoption look when measured per person? And why should this metric redefine how we approach renewable energy policies?

Per capita energy consumption from solar, 2024 Measured in kilowatt-hours of primary energy per person, using the substitution method.

OverviewEuropeGlobal use figuresAfricaAsiaNorth AmericaOceaniaSouth AmericaEuropean deployment of photovoltaics has increased considerably since the year 2010. Cumulative solar PV capacity in the European Union reached over 300 GW in 2024, with industry projections anticipating total capacity more than doubling by 2030, which would take solar power's share in EU electricity generation (9.2% in 2023) over 20%. Outside of the EU, similar growth in solar power is taking place in the United Kingdo...

The installed capacity of power plants that generate electricity from renewable energy sources. This includes hydropower, marine (ocean, tidal and wave), wind, solar (photovoltaic and thermal energy), ...

Solar photovoltaic panels installed per capita
