

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Solar energy generation, measured in gigawatt-hours (GWh) versus installed solar capacity, measured in gigawatts (GW).

The world generated 2,109.76TWh of electricity from solar PV in the first nine months of the year, more than the total solar generation reported in 2024. This is according to the Q3 Global...

In this article, with the help of charts and key statistical data, we reveal the latest solar power statistics that demonstrate how the industry has grown so far, and the outlook and potential for ...

Solar remains the third largest renewable electricity technology behind hydropower and wind -- but it accounted for just 4.5% of total global electricity generation in 2022. To meet net-zero ...

In terms of technologies, solar PV alone is forecast to account for a massive 80% of the growth in global renewable capacity between now and 2030 - the result of the construction of new ...

According to the International Energy Agency (IEA), the share of solar power is up from 5% to 7%. The IEA expects global PV module generation to increase by 1,800 TWh per year ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...
