

Such batteries are essential for electronic devices and systems used in cold environments. The project will complement the regional battery ecosystem within the Interreg Aurora programme area and ...

For decades, solid-state batteries have been the holy grail that all major automakers have pursued. But while the tech giants are still sitting in their laboratories planning for 2027 or 2030, ...

The aim of this thesis is to show which rechargeable battery technologies receive research funding and which are patented in Sweden. This is important to understand what is happening in the industry to ...

The Swedish battery industry is at the forefront. Sweden also has related strengths and opportunities in areas such as vehicles and electrical systems, as well as a strong mining cluster.

By exploring key factors such as research and development capabilities, sustainable practices, a skilled workforce, and a supportive ecosystem, this guide will demonstrate why joining Sweden's battery ...

Med solid state-batterier som har en fast i stället för flytande elektrolyt kan vi elbilar som laddar snabbare, tar sig längre mellan laddstoppen och dessutom skräp i dagens batterier.

There is a particular focus on Li-ion batteries but the research also covers solid-state batteries, sodium-based batteries and organic electrode materials. The University also participates in ...

Therefore, using bio-based and recycled materials to build the sustainable solid-state lithium-ion batteries from electrodes to electrolytes, is essential. The research project SSSLiB will ...

The project is accordingly focus on manufacturing methods that are capable of upscaling an all-solid-state lithium-ion battery by a solid-phase fabricating process.

When exploring the solid-state battery industry in Sweden, several key considerations emerge. Sweden's strong commitment to sustainability and its robust regulatory framework present both ...
