

Switzerland is expanding rules for rooftop solar, energy storage, and energy communities to expand self-consumption and ease pressure on the grid. The new regulations, set to take effect in ...

We have already taken the first concrete step and defined the technical minimum requirements for connecting large storage systems. Our aim is to promote innovation and work with ...

Switzerland's home solar energy storage market is growing rapidly, driven by federal incentives, regional subsidies, and a strong national commitment to sustainability.

Based on current scientific knowledge, leading Swiss researchers consider that where large amounts of energy need to be stored for the medium to long-term, technologies such as ...

As we approach Q2 2025's bid deadline, one thing's clear: Switzerland isn't just buying storage systems--they're procuring grid resilience. The winners won't be those with the cheapest kWh price, ...

Companies with PV systems that want to become less dependent on feed-in tariffs should increase their own consumption. Battery storage systems can help with this. Better framework conditions apply to ...

Switzerland plans to remove 2 million tonnes of CO₂ a year by 2050 through bioenergy with carbon capture and storage (BECCS) and direct air capture (DACCS).

Trade body Swissolar has called for a national energy storage strategy to support the rising popularity of home solar-plus-battery systems in the country. In Switzerland, roughly every ...

The bill includes funding instruments as well as new regulations for electricity production, transport, storage and consumption. It also introduces a mandatory hydropower reserve.
