

The wind turbine was blown away by the wind and the power was cut off

Why do wind turbines shut off during storms? Wind turbines are inherently designed to capture wind, but must be shut down to protect themselves if wind speeds become excessively high.

Strong gusts brought by Typhoon Cimaron on Friday, August 24, caused a massive wind turbine in western Japan to topple over.

Within hours of fiberglass from a broken offshore wind turbine washing ashore on Nantucket, clean energy and anti-wind advocates jumped on the story, and two competing narratives ...

To make his wind turbine work without wind, Mr. Bean decides to do something malicious. He traps a mouse in a fish bowl on a shelf next to a wheel with Scrapper running on it, thus powering the turbine ...

As the wind speed continues to increase, the power generated by the turbine remains constant until it eventually hits a cut-out speed (varies by turbine) and shuts down to prevent...

It came as Storm Gerrit blew through Britain on Wednesday and Thursday, bringing winds of up to 85mph and causing massive travel chaos. 27,000 were also left without power by the ...

The turbine, which was almost the height of St Paul's Cathedral, was torn apart by the raging winds and eventually collapsed to the ground in February. Families in the nearby village of ...

Shocking video footage shows Storm Gerrit tearing apart a wind turbine in Ayrshire, Scotland. Debris from the lone wind turbine was flung into the seemingly empty field surrounding it. An...

Examples of turbines malfunctioning have captured public interest. Multiple turbines that are taller than 750 feet are collapsing across the world, with the tallest--784 feet--falling in Germany ...

Understanding common failure causes in wind turbines is essential for optimising performance and reducing maintenance costs. This article explores seven key failure types, ...
