Uninterruptible power supply is considered a high-power appliance

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

A UPS (uninterruptible power supply) in an IT context is a device that provides backup power to equipment during interruptions or instability in the power grid, thus protecting against data loss and ...

Uninterruptible power supplies or UPSs are battery chargers consisting of a combination of convertors, switches and energy storage devices (such as batteries), constituting a power system for maintaining ...

A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. T...

Apparent Power (VA) is the rate of conversion of electrical energy which includes the Real Power (Watts) and the Reactive Power (Q). The watt and VA ratings of the UPS are independent maximum ...

Unlike a common emergency power system or standby generator, an uninterruptible power supply can provide nearly instantaneous protection from input power interruptions by using the ...

Commonly known as a battery backup, an uninterruptible power supply (UPS) is a rechargeable battery used to backup main power feeds and provide seamless power when there is a main line utility outage.

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.
