

Upstream and downstream of photovoltaic support

Based on a sample of globally leading solar PV manufacturers originated in Canada, China, Germany, South Korea, and the United States of America we conduct a detailed analysis and ...

Unicorn Solar provides a brief overview of the upstream and downstream sectors of the PV industry, intending to highlight what happened in 2023 and the first half of 2024.

Following the downstream transmission of anti-price-war effects, wafer manufacturers in the midstream shifted their production strategies toward tighter pace control. Full-year utilization rates ...

What's the difference between a midstream and a downstream PV industry? The industry's midstream produces batteries, cell components, and related products. The downstream is an integration of the ...

This article proposes a methodology and economic model that considers technological progress and economies of scale to analyze a potential upstream development and integration of the ...

The dependency on PV products from a single country would jeopardize the deployment of solar energy in Europe in case of potential supply disruptions. In a joint statement, the ...

The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) works to accelerate the advancement and deployment of solar technology in support of an equitable transition to a ...

Both network agglomeration and network efficiency have a negative impact on the vulnerability of upstream, midstream and downstream networks in the PV industry chain.

In the PV module supply chain, it can take years to build new facilities. The further up the supply chain (further left on the graphic above), the longer the building time, which includes steps like siting, ...

Globally, policies to support solar PV to date have focused mostly on increasing demand and lowering costs. However, resilient and sustainable supply chains are also needed to ensure the timely and ...
