

What is a mobile electrical box power supply

What is a portable electrical substation?

The portable electrical substation is more integrated and flexible than conventional substations, which are fixed, while the portable electrical substation is mounted on a low-profile semi-trailer and can be moved to the destination using a standard tractor as long as the road traffic permits and the power point is suitable.

What is a mobile substation?

Mobile substations are a type of power distribution system that can be transported and installed quickly and easily in different locations. They are used to provide temporary or emergency power supply to areas where the grid is unavailable or has been damaged, such as construction sites, disaster zones, remote areas, or events.

How a mobile substation can improve the reliability of power supply?

In particular, mobile substations with conventional capacity of 10~40MVA, 35kV and 110kV can greatly improve the reliability of power supply, which is an effective solution to reduce the average power outage time of customers and is in line with the development trend of the new generation of intelligent substations.

Why do we need mobile substation?

The use of mobile substation will effectively reduce the substation transformation outage time, can be in the case of accidents, emergency repair and natural disasters, rapid replacement of conventional substations, play the role of emergency power supply.

A power supply may need to be flexible to handle short-term applications. Sometimes, power supplies are required on construction sites or for civil contracts. When there is high electricity ...
