

Will the generator burn out if the wind resistance is not turned off

A generator can mean the difference between comfort and misery during a power outage. Gas it up or plug it in incorrectly, however, and your safety could be at risk.

Standard generator installations may not adequately account for the forces exerted by extreme wind conditions, potentially leading to damage or dangerous situations. For portable ...

A generator can save the day during a power outage, but it can also be deadly if you're not careful. Every year, people die from carbon monoxide poisoning because they ran their generator ...

You've got a commercial generator powering your worksite through stormy weather. The winds are hitting 45 mph, but nobody remembered to adjust the wind resistance settings. By morning, your ...

Stay informed about any severe weather warnings, and be prepared to shut off and disconnect your generator if necessary. Safety should always be the top priority, and it's best to wait until the storm ...

There are several ways to solve for this, from framed covers to customized boxes to partial enclosures you can build yourself. Ahead, we dive into the pros and cons of each option.

Never run a generator in an enclosed space or indoors. Most generator-related injuries and deaths involve CO poisoning from generators used indoors or in partly enclosed spaces.

A generator can keep essentials running, but it can also turn dangerous quickly if it's used the wrong way. The biggest risks are carbon monoxide poisoning, electrical shock and fire.

Bad weather like storm, rain, and cyclones can create a bad impact on the efficiency of your portable generator. Check here our guide to keep your generator safe and sound during bad weather.

Even using a generator in partly enclosed spaces with fans is still dangerous. "Generators emit harmful carbon monoxide, so you should never use [it] in an enclosed space," says ...
