

F03D9/00 -- Adaptations of wind motors for special use; Combinations of wind motors with apparatus driven thereby; Wind motors specially adapted for installation in particular locations

Elevate your wind energy solutions with our Wind Blade with Hub and Hood, designed specifically for Wind Turbine Generators. Available in a range of sizes from 530mm to 800mm, these blades are ...

The invention discloses a special wind collecting hood for a wind power generation integrated module. The collected breeze can be discharged through a wind collection opening with a smaller ...

wind energy generation than others. In general, wind speeds are higher near the coast and offshore since there are fewer objects like vegetation, mountai. and buildings to slow them down. The ...

A wind guiding hood for wind power generation includes a frame, a wind guiding hood, a turbine and a wind direction detector. The turbine is installed in the wind guiding hood,...

The present invention relates to a kind of protective housing, particularly relate to a kind of wind-driven generator protective hood.

The utility model relates to wind generating technology, specifically is a kind of hood that is applicable to wind power generating set.

Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves using wind turbines to convert the turning motion of blades, ...

How Do Wind Turbines Work? Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan--wind turbines use wind to make electricity. Wind turns the propeller-like ...
